

## NetCom Information Technology Provides Training to Cisco's Top Engineers

### **Business Needs:**

Cisco has been at the heart of many historic changes in technology. Now, at a time when the technology industry is going through a period of dramatic change, Cisco is becoming the leader in wireless and security. Wireless connectivity promotes unprecedented mobility and flexibility for information workers. Freed from needing to be hard-wired to an IP cable, people can move freely, connecting to the voice and data network wherever wireless access is supported. This has led to improvements in productivity at work, at home, and in a variety of public places, allowing people to connect to networks with laptops, PDAs, phones, and more. It has enabled new and more flexible workplace designs. Cisco realized that to gain market share it needed not only to bring its resources up-to-date in planning, designing, deploying and managing Wireless networks, but also provide its clients with the necessary training so they can deploy Cisco's Wireless solutions.

### **Solution:**

Cisco approached NetCom Information Technology, a leading Cisco and CWNP Partner nationwide, with an impressive success record, to design a course for Cisco's top Network Engineers. This course is designed to give students a firm understanding of the components, features and proper deployment of Wireless networks. This customized training solution provided the networking professional a complete set of skills in the wireless networking industry, from implementing and managing wireless security in the enterprise to analyzing and troubleshooting Wireless systems. "Providing quality training to the top engineers of a leading vendor like Cisco, it has brought pride and increased our self-esteem as a capable training provider that can undertake and deliver such initiatives", Russell Sarder, President & CEO of NetCom Information Technology said.

### **Training Courses Taken:**

[CWNA Boot Camp](#)  
[CWSP Boot Camp](#)

### **Packages Purchased**

[Wireless Boot Camp \(Wireless#, CWNA, CWAP, CWSP\)](#)

### **Benefits:**

The training helped Cisco's engineers to develop and deliver the company's latest courses in Wireless technologies such as CWLF and CWLAT to Cisco employees and clients around the world and opened the door to many business opportunities. As organizations adopt wireless LAN technology to offer higher levels of customer service and gain the competitive advantages of an increasingly mobile and productive workforce, they need qualified professionals who can design, install, support, and operate a mobile wireless solution. Now, Cisco has the range of learning offerings for these IT professionals and organizations.
